ABOUT US

Bloss Landscape Architecture was founded in 1998 on the belief that diverse perspectives—primarily of different disciplines—are integral to great design. As a firm committed to learning and growing, our definition of diversity has evolved, and is inspiring us to build a more equitable and inclusive culture.

COZY CAFE & LOUNGE

Elegant

The plant landscape elements make the space in a better environment

①

Spatial effects

The smaller plant landscape elements enhance the atmosphere of the space and reduce visual fatigue

②

Color

The plant landscape elements are formed into a color space, the problem of unbalanced and boring color of the space greatly reduced

③

HYATT REGENCY BAKU

Aesthetic function

The color of the plant landscape elements is considered together with the main color of the space itself, the visual attraction of the design of the catering space can be increased by the fusion and contrast of the two colors

Texture

Different textures can soften the hotel space effectively, so that primary and secondary points in the space give the overall comfortable visual effect

Contrast

The effect of contrast is reflected by the strength of contrast, which is essentially against each other. To highlight each other's personality, but also serve the overall effect when applied

Nature

In the layout, the application of frame, clip, and borrowing is not limited to the framework of indoor space. The layout mode gives people the feeling of returning to nature

Growth changes

Different growth stages produce different visual effects, and the visual center of the composition plays a very good role in beautifying the visual environment

Rhythm

Rhythm is a regular or irregular intermittent reproduction, and the spatial distance in which it is repeated is the rhythm

AZERCCELL TELEKOM

Landscaping

The site must reflect the elements of Azerbaijan villages and should be designed in a manner that maintains the beauty of natural scenery in order to achieve a balance and harmony between the buildings and their surroundings

Sustainable Landscape Design

The project investigates the concepts of sustainable site design and applies those concepts to the landscape design of Azercell's office park

Plants

Plants should be in harmony with the site's natural topography, contrast and respond to the architectural form

SPATIAL ANALYSE & RISK PREVENTION PLANING

Spatial Analyse

For design development and assessment, the accurate topographic and land-use maps of the area are needed in order to get better understanding of the parameters in the design

Winds and precepitation

Studying of seasonal winds and average precipitation allows to control watering, fertilizing and etc.

RPP

Establishment of Risk Prevention Planing is the fundamental approach in landscape design. We use in order to prevent possible risks link to a trees or natural risks

CPTED

We use CPTED in landscaping. Natural surveillance occurs by designing the placement of physical features, activities and people in such a way as to maximize visibility of the space and its users, fostering positive social interaction among legitimate users of private and public space

VILLAGE

Project

Village project was started at 2017. The main goal was to create landscape which contains Azerbaijan's old village style and modern elements.

Plants contrast

The plants' color and on the other hand their's forms were supposed to emphasize the comfort and hospitality
